Instructions

Create a single PDF for the team

- Document what features were completed, what worked during the demo, what issues were faced either during the development or during the demo, and what were the suggestions offered by the TA.
- This project milestone 3 submission should be a PDF document named ProjectMilestone3_[TeamNumber] and pushed to the MILESTONES repository in git.
- On Canvas, include a text file with the link to your MILESTONES git repository.

Features Completed:
1. Front-end (iOS/Android in React Native)
   a. Log-in/Register views with real time feedback for valid passwords/usernames
2. Back-end (AWS)
   a. Login/Register functions written in Node, hosted through AWS Lambda + API Gateway
   b. Postgres database hosted through AWS RDS with all tables completed

Issues Faced:
1. Getting caught up on React Native, setting up all the infrastructure for version control / AWS Integration (API gateway).
2. Ensuring our initial database design would be efficient and work with all the features we need.

Suggestions Offered:
1. Think about how to host + stream video because it's really complicated.
   a. AWS Elemental MediaConvert is something we have been looking at
